Growing Together

Child-Focused Consultation

Infant and Early Childhood Mental Health Consultation (IECMHC)

IECMHC pairs a consultant with adults caring for young children to support social-emotional development, address behavior concerns, and strengthen relationships

Individualized Support for Children in your Classroom

1. We take a personalized approach to learn about the child. This may include:

- Observing the child in their classroom
- Modeling and coaching strategies to decrease challenging behaviors and promote the child's social-emotional development
- Collaborating with teachers and ECE staff
- Connecting with the family to gain further insights

2. Together, we will create a tailored plan to address your child's needs in the preschool setting. The plan will incorporate input from both parents and providers.

3. We strive to connect your program with additional community resources. Our consultants will also help link the family to community services that support your child's growth and development.
